*West Basin – Providing a safe and reliable supply of high-quality water to the communities we serve.*

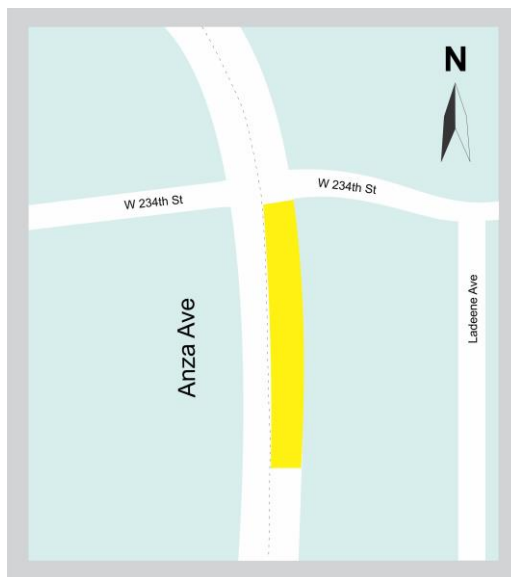

West Basin Municipal Water District is constructing a new recycled water pipeline that will expand recycled water use in the City of Torrance and bring the first drop of recycled water to the Palos Verdes Peninsula.

### What to Expect

A small section of the recycled water pipeline will be installed via jack and bore, a trenchless installation method that allows the pipeline to cross the channel at Anza Avenue just south of 234th Street. Project activities include excavation, shoring, boring, deliveries of materials and use of construction equipment.

- Reduction of northbound travel lanes and parking restrictions required 24 hours a day in work area. “No Parking” signs will be posted in advance.
- K-Rails (temporary concrete barriers) and fencing in work areas
- Some noise, dust and vibration during work activities
- Intermittent sidewalk closure in work area
- Through-traffic will be maintained at all times
- No disruption to utility, trash or delivery services

### Location

The jack and bore work will occur on Anza Avenue between 234<sup>th</sup> Street and 236<sup>th</sup> Street.

### Background

The Palos Verdes Recycled Water Pipeline Project is a new 3.5-mile-long recycled water pipeline that will connect to West Basin’s existing system at Anza Avenue and Calle Mayor in Torrance and deliver recycled water for irrigation purposes to Lago Seco and Los Arboles “Rocketship” Parks, Richardson Middle School, Riviera Elementary School, medians on PCH and Anza Avenue and the Palos Verdes Golf Club. The project also includes a booster pump station located at Lago Seco Park in Torrance that will store the pumps needed to carry recycled water to higher elevations.
