

PROJECT FACT SHEET

Palos Verdes Recycled Water Pipeline Project Booster Pump Station

Construction Schedule

Construction of the booster pump station is anticipated to begin in August 2024 and be completed in Spring 2025.

What to Expect During Construction

There will be some construction noise, dust and vibration. Temporary parking restrictions at Lago Seco Park during construction of the building that will house the booster pump station. Relocation of four vehicle spaces in the parking lot of Lago Seco Park (see map on back of page).

Utility services, mail and other delivery services, and trash collection should not be affected.

Construction Information

West Basin has a construction awareness team in place to keep the public informed during construction.

If you have any questions or concerns, please contact the Construction Awareness Team at (424) 246-6878 or recycledwateroutreach@westbasin.org.

West Basin Municipal Water District (West Basin), a public agency that provides imported drinking and recycled water to 17 cities in Los Angeles County, is committed to providing a safe and reliable supply of high-quality water to its one million customers.

West Basin is constructing a new recycled water pipeline and booster pump station that will expand recycled water use in the City of Torrance and bring the first drop of recycled water to the Palos Verdes Peninsula.

The Project

The Palos Verdes Recycled Water Pipeline Project began with construction of the 3.5-mile recycled water pipeline in July 2023. Construction of the pipeline is expected to be completed in September 2024.

The booster pump station will house the pumps needed to carry recycled water to higher elevations. The pump station will be located on the southeast corner of Lago Seco Park near Ocean Avenue and West 238th Street.

Project Benefits

The conversion of potable water infrastructure to recycled water for irrigation purposes saves fresh drinking water for human consumption and adds cost savings with the use of recycled water to the cities of Torrance and Palos Verdes Estates and the Torrance Unified School District.

The project will deliver about 240 acre-feet, or nearly 80 million gallons, of recycled water for irrigation purposes each year to seven new sites, which is the equivalent of 118 Olympic-size swimming pools.

West Basin – Providing a safe and reliable supply of high-quality water to the communities we serve.
